PROFESSIONAL SUMMARY

Frontend Developer and UX/UI Designer with 4+ years of experience building interfaces in Angular, React, and TypeScript. My profile blends design and engineering: I think through interfaces starting in Figma and carry them all the way to production, whether working within multidisciplinary teams or independently as a freelancer. In recent years, I've built AI tools (GitHub Copilot, OpenAI API, Codex) into my actual daily workflow, not just experimented with them.

TECHNICAL SKILLS

Frontend: React, TypeScript, JavaScript (ES6+), Angular, HTML5, CSS3, SCSS, RxJS, NgRx, Tailwind CSS, Vite, Angular Material.

Backend & Data: Node.js, REST APIs, relational databases, Postman, Power BI, VTEX.

AI-Assisted Development: GitHub Copilot, OpenAI API, Codex agents.

Tools & Methodologies: Git, Azure DevOps, Jira, Agile, Scrum, Linux, Bash.

Performance & Design: Core Web Vitals (LCP, INP, CLS), responsive design, ARIA, Figma (Design Systems, tokens).

PROFESSIONAL EXPERIENCE

Frontend Developer & UX/UI Designer — Tivolifest (Freelance)

Jan 2025 – Present | Buenos Aires, Argentina

- Solely designed and built the frontend of an event-management app handling roughly 30 events a month, owning the full cycle from Figma prototyping through Angular/TypeScript development to production deployment.
- Automated event creation in Google Calendar from a Google Sheet, using Google's AI to process and fill in the event data automatically.
- For the invitations site, built the frontend in Angular and TypeScript with inline styles, working with Codex agents to speed up development and applying current frontend best practices, with user CRUD on Firebase.

Frontend Developer & UX/UI Designer — Accenture

Jul 2022 – Nov 2024 | Visual Analytics / Data Science Team | Buenos Aires, Argentina

- Built the Angular frontend for corporate projects in insurance, HR Intelligence, and logistics, connecting REST APIs for multi-step wizards and data dashboards.
- Found a hard-to-maintain styling architecture and rebuilt it with reusable SCSS mixins, themes, and utility classes (Tailwind, Bootstrap), making it easier to work with and visually consistent across projects.
- Co-created "Assets," my team's Figma Design System and UX Data Viz library, from scratch — still used today by all 7 designers on the Business Data Science team.
- Worked closely with design, engineering, and business stakeholders, and built standard UX Discovery artifacts that streamlined alignment across the team.

Full Stack Developer — Salón del Peinador

Mar 2022 – Jun 2022 | Buenos Aires, Argentina

- Built a VTEX e-commerce storefront with React and Node.js, including custom storefront components and a multi-brand hair-care product catalog.
- Integrated Mercado Pago for checkout and Mercado Libre for shipping and marketplace listings, and structured the relational database behind stock and order processing.

EDUCATION

Computer Science Engineering — Universidad de Buenos Aires (UBA) | 2024 – Present

Full Stack Web Development — Digital House | 2021 – 2022

COURSES & CERTIFICATIONS

- UX Design Systems** — UX Christopher | 2025 – 2026. Design tokens and variables, color documentation, typography and elevation scales, iconography, atomic design, advanced semantic tokens.
- Consulting Intensive Training Program** — Accenture, St. Charles, Illinois | Jan 2024. Generative AI, project planning, design thinking, storytelling.
- Foundations of User Experience (UX) Design** — Google | 2023 – 2024.
